Final Report

Bioanalysis of COHb in Human Whole Blood
In Support of Clinical Study Protocol (ZRHM-REXA-07-JP)

Title of the clinical trial: A randomized, controlled, open-label, 3-arm parallel group, multi-center study to demonstrate reductions in exposure to selected smoke constituents in healthy smokers switching to the Tobacco Heating System 2.2 Menthol (THS 2.2 Menthol) or observing smoking abstinence, compared to continuing to use menthol conventional cigarettes, for 5 days in confinement and prolonged by 85 days in an ambulatory setting

I. Summary

This report describes the determination results of COHb in human whole blood as a part of Study Number: ZRHM-REXA-07-JP requested by (b) (4). Measurement was performed using a method previously validated. The validation data were presented in the final report of "Validation for the determination of COHb in human whole blood" (b) (4), and support the internal SOP No. 30-B-020-03. Consequently, this study was performed according to this SOP No. 30-B-020-03 (June 30, 2011) (b) (4).

II. Materials and method

1. Analytical samples

Title of the clinical trial	A randomized, controlled, open-label, 3-arm parallel group, multi-center study to demonstrate reductions in exposure to selected smoke constituents in healthy smokers switching to the Tobacco Heating System 2.2 Menthol (THS 2.2 Menthol) or observing smoking abstinence, compared to continuing to use menthol conventional cigarettes, for 5 days in confinement and prolonged by 85 days in an ambulatory setting
Clinical trial No.	ZRHM-REXA-07-JP
Operation protocol No.	CLS2013-031
Matrix	Human Whole Blood
Anticoagulant	Sodium Heparin
Sampling point	10 points (Day -1, Day 0, Day 1, Day 2, Day 3, Day 4, Day 5, Day 30, Day 60, Day 90)
Condition at reception	1-10°C, with cold pack
Number of subjects	205
Number of discontinued subjects	61
Number of received samples	2675
Number of analyzed samples	2675
Storage condition	1-10°C
Term of validity	With the exception of some samples, analyzed within 3 weeks after collection. ¹⁾
Handling after analysis	Residual samples were destroyed at TCI after the analysis

7. Re-analysis

7.1. Re-analysis

In the following cases, the re-analysis should be conducted.

(1)	The acceptance criteria for QC samples are not satisfied.
(2)	A problem on the analytical equipment or instrument occurs. a. Clogging of a nozzle or cell, or similar problem, occurred.
(3)	A technical error is recognized on the determination such as; a. Analytical sample is lost by tubes broken. b. A fibrin clot was aspirated, preventing a correct measurement value from being obtained.
(4)	The study director or study staff judges the re-analysis is necessary. a. It was confirmed that a little fibrin clot was sucked at the tip of the nozzle after analysis etc.

III. Results

2. Raw data

The raw data obtained in this study are shown in Tables 1 to 3.

The results (Table 1) of calibration (tests were performed within 40 days of the most recent calibration) and the measurement results (Table 2) from the measured QC samples on each measurement day were within the control range designated by the Instrumentation Laboratory.

Fibrin precipitation was observed in 377 samples per 2675 samples analyzed beginning with the sample from Subject ID 0065, at Visit Day -1 (Time Point: 20:00-21:30). A reference comment was added for these samples(377 samples) due to fibrin precipitation. ("Data could be affected by fibrin" was entered in the Supplementary Comment 1 space (Table 3).) Because notice of sample receipt from the clinical testing facility was late, some samples(51 samples of 377 fibrin precipitation samples) were measured more than 3 weeks after they were collected. Those samples which were measured more than 3 weeks after collection were marked "measured more than 3 weeks after collection" (refer to the mark of * in Table 3).

IV. Discussion

The results in accuracy control satisfied the acceptance criteria.

Except for 51 samples the samples described in III.2, the determination was conducted within the period of storage (3 weeks after collection) in which stability was confirmed.

Except for the samples which were measured more than 3 weeks after collection, the Raw data measured in this study were obtained in the expected and acceptable experimental conditions regarding the study plan and the purpose of the study.

V. Conclusion

An unforeseeable event that may have adversely affected the reliability of the study and deviations from the analytical protocol was noted in this study. This means the occurrence of samples which were measured more than 3 weeks after collection. Because the stability of these samples could not be guaranteed, they were used only as reference values ("for reference purposes only").

In addition, the data obtained from the 377 samples with fibrin precipitation lacks reliability, and hence is for reference purposes only. "Data could be affected by fibrin" were added to the test results. Except for the samples which fibrin precipitation was observed, the data obtained in this study can be

Sponsor: Philip Morris Products S.A.

Study Number: ZRHM-REXA-07-JP

STATUS: Final

DATE: 26 September 2014

judged reliable and could be used as "Blood biomarker of exposure" in the main study

ZRHM-REXA-07-JP.

VI. Event Observations and Deviations as noted in the related SAMPLE ANALYSIS PLAN-FINAL. There are 377 samples with fibrin precipitation. Among these samples, 51 samples have been analyzed outside the 3 week period of stability. These 51 samples are deviation from SAMPLE ANALYSIS PLAN-FINAL. As for the 377 samples with fibrin precipitation, the data lacks reliability and is for reference purposes only. We added comment as "Data could be affected by fibrin"

1) Because the nozzle became clogged, a new nozzle was obtained from II, Japan and the remaining 6 samples were measured after nozzle replacement on the following day (8/27).

2) Because of the large number of samples, and also because there were many samples which were measured more than 3 weeks after collection, fibrin clots remained in the cell and time was required for cleaning and removing the fibrin clots. As a result, measurement took place over 2 days.

Acceptable range of II, Multi-4™ CO-Oximeter control solutions (N0132817, Exp. date 2014.04)
