

PMI RESEARCH & DEVELOPMENT

Study ZRHM-REXA-08-US Clinical Study Report Appendix 15.2 Tables

Study Title:	A randomized, controlled, open-label, 3-arm parallel group, multi-center study to demonstrate reductions in exposure to selected smoke constituents in apparently healthy smokers switching to the Tobacco Heating System 2.2 Menthol (THS 2.2 Menthol) or observing smoking abstinence, compared to continuing to use menthol conventional cigarettes, for 5 days in confinement and prolonged by 86 days in an ambulatory setting
Study Number:	ZRHM-REXA-08-US
Product Name:	Tobacco Heating System 2.2 Menthol (THS 2.2 Menthol)
Study Initiated (first subject screened):	17 December 2013
Study Completed (last subject last visit):	12 October 2014
Principal Investigator and Affiliation:	Dr William Lewis, Covance Dallas Site 1341 W. Mockingbird Ln., Suite 400E Dallas, TX 75247 Dr Frank Farmer, Covance Daytona Beach Site 1900 Mason Ave., Suite 140 Daytona Beach, FL 32117
Sponsor:	Philip Morris Products S.A. PMI Research & Development Quai Jeanrenaud 5 2000 Neuchâtel, Switzerland
Sponsor Signatories:	Christelle Haziza, PhD, Manager P1 Clinical Program, Clinical Scientist Guillaume de La Bourdonnaye, MEng, MSc, Biostatistician Andrea Donelli, Clinical Scientist Ruben Rosoky, MD PhD MFPM, Medical Safety Officer
Version:	1.0
Date:	25 May 2016

This study was conducted in accordance with Good Clinical Practice.

15.2 SUMMARY TABLES

15.2.1 Disposition and Background Data Summary Tables

**Table 15.2.1.1 Summary of Subject Disposition - All Screened Subjects**

Status	Overall Screened (N=659) n(%)
Screen failures	495 (75.1)
Screening failures, without product test	494 (75.0)
Screening failures, with product test	1 (0.2)
Completed safety follow-up	0
Reason for screen failure	
Entry criteria not met	445 (67.5)
Withdrawal by subject	24 (3.6)
Adverse events	0
Other	26 (3.9)
Enrolled	164 (24.9)
Enrolled not randomized	4 (0.6)
Enrolled not randomized who completed safety follow-up	4 (0.6)
Randomized	160 (24.3)

Note: mCC = Menthol conventional cigarettes; SA = Smoking abstinence; THSm2.2 = Tobacco Heating System 2.2 Menthol.

Note: Discontinued refers to randomized subjects who discontinued from the study before the planned discharge at Day 91; Completed at Period X Visit refers to randomized subjects who did not discontinue the study before the completion of study assessments at Period X Visit.

Note: Percentages for disposition prior to randomization are based on the number of subjects screened. Percentages for 'Completed safety follow-up' under 'Screening failures, with product test' are based on the number of subjects who screen failed with the product test. Percentages for disposition after randomization are based on the number of subjects randomized indicated in the column header (N), apart from the Overall column where only percentages of completed and discontinued refer to the total number of subjects randomized.

Note: Period 1 to Period 4 refers to the confinement, 30, 60, and 90 day periods, respectively.

15.2.3 Primary Endpoints Summary Tables

Table 15.2.3.1.1 Analysis of COHb, MHBMA, 3-HPMA, S-PMA, and Total NNAL on Day 5/90 Visit for THS 2.2 Menthol versus mCC for the Primary Objective - PP Set

Variable	Statistic	THSm2.2	mCC	THSm2.2 : mCC Ratio (%)
MHBMA (pg/mg creat)				
Day 5	n	65	30	
	Geometric LS Mean (CV%)	110.96	882.25	12.58 (76.92)
	95% CI	93.49, 131.68	687.25, 1132.57	9.27, 17.05
	p-value (one-sided)			<0.001
Day 90	n	43	29	
	Geometric LS Mean (CV%)	213.78	1154.52	18.52 (85.36)
	95% CI	169.12, 270.22	875.26, 1522.88	12.85, 26.67
	p-value (one-sided)			<0.001

Note: Adjusted geometric least squares (LS) means and confidence intervals (CIs) from an ANCOVA model conducted on log-transformed values with log-transformed baseline value, study arm, sex and mCC consumption reported at screening as fixed effect factors. Geometrical CV% of the ratio is estimated from the residual mean squares.

Note: mCC = Menthol conventional cigarettes; THSm2.2 = Tobacco Heating System 2.2 Menthol.

Note: p-value for one-sided test for comparison between THSm2.2 and mCC. P-value at Day 90 is evaluated only if P-value at Day 5 is significant, in all biomarkers except for Total NNAL.

Note: For the primary objective, Total NNAL is evaluated at Day 90 while the other biomarkers are evaluated at Day 5. For the secondary objective, Total NNAL is evaluated at Day 5 while the other biomarkers are evaluated at Day 90.

Table 15.2.3.1.1 Analysis of COHb, MHBMA, 3-HPMA, S-PMA, and Total NNAL on Day 5/90 Visit for THS 2.2 Menthol versus mCC for the Primary Objective - PP Set

	Geometric LS Mean (CV%)	6420.23	5769.37	8317.37	111.28 (89.45)	77.19 (89.45)
	95% CI	4993.87, 8253.99	4326.33, 7693.73	4618.67, 14978.04	75.67, 163.64	40.52, 147.02
	p-value (one-sided)					

Note: Adjusted geometric least squares (LS) means and confidence intervals (CIs) from an ANCOVA model conducted on log-transformed values with log-transformed baseline value, study arm, sex and mCC consumption reported at screening as fixed effect factors. Geometrical CV% of the ratio is estimated from the residual mean squares.

Note: mCC = Menthol Conventional cigarettes; SA = Smoking abstinence; THSm2.2 = Tobacco Heating System 2.2 Menthol.

Note: p-value is for the one-sided test for comparison between THSm2.2 and mCC. P-value at Day 90 is evaluated only if p-value at Day 5 is significant, in all biomarkers except for Total NNAL.

**Table 15.2.3.7 Sensitivity Analysis of Additional Biomarkers of Exposure versus mCC and SA on Day 5/90 Visit - Compliant Population**

Variable	Statistic	THSm2.2	mCC	SA	THSm2.2 : mCC Ratio (%)	THSm2.2 : SA Ratio (%)
NEQ (mg) Day 5	n	69	31	22		
	Geometric LS Mean (CV%)	11.41	13.54	0.36	84.24 (60.15)	3135.73 (60.15)
	95% CI	9.96, 13.06	11.10, 16.52	0.28, 0.47	66.33, 106.97	2394.67, 4106.11
	p-value (one-sided)				0.079	
Day 90	n	38	29	7		
	Geometric LS Mean (CV%)	10.80	11.02	1.09	97.94 (86.86)	992.07 (86.86)
	95% CI	8.40, 13.88	8.31, 14.62	0.61, 1.94	66.93, 143.31	529.35, 1859.25
	p-value (one-sided)					

Note: Adjusted geometric least squares (LS) means and confidence intervals (CIs) from an ANCOVA model conducted on log-transformed values with log-transformed baseline value, study arm, sex and mCC consumption reported at screening as fixed effect factors. Geometrical CV% of the ratio is estimated from the residual mean squares.

Note: mCC = Menthol Conventional cigarettes; SA = Smoking abstinence; THSm2.2 = Tobacco Heating System 2.2 Menthol.

Note: p-value is for the one-sided test for comparison between THSm2.2 and mCC. P-value at Day 90 is evaluated only if p-value at Day 5 is significant, in all biomarkers except for Total NNAL.
