Note: Adjusted geometric least squares (LS) means and confidence intervals (CIs) from an ANCOVA model conducted on log-transformed values with log-transformed baseline value, study arm, sex and mCC consumption reported at screening as fixed effect factors. Geometrical CV% of the ratio is estimated from the residual mean squares.

Note: mCC = Menthol conventional cigarettes; SA = Smoking abstinence; THSm2.2 = Tobacco Heating System 2.2 Menthol.

Note: p-value for one-sided test for comparison between THSm2.2 and mCC. P-value at Day 90 is evaluated only if p-value at Day 5 is significant.

Note: mCC = Menthol conventional cigarettes; SA = Smoking abstinence; THSm2.2 = Tobacco Heating System 2.2 Menthol.

Note: Percentages for 'Has the subject experienced a cough' are based on the number of subjects indicated in the column header (N). Percentages for intensity of cough are based on the number of subjects who have experienced a cough.

Note: Cough experienced in the previous 24h by the subjects is assessed in the morning of Day 0 to Day 6. If subject has answered question more than once then the most severe intensity is presented.

Note: The assessments performed at Day 0 to Day 6, Day 31, 61, and 91 are used to evaluate cough at Day - 1 to Day 5, Day 30, 60, and 90, respectively.

Note: mCC = Menthol conventional cigarettes; SA = Smoking abstinence; THSm2.2 = Tobacco Heating System 2.2 Menthol.

Note: Percentages for 'Has the subject experienced a cough' are based on the number of subjects indicated in the column header (N). Percentages for intensity of cough are based on the number of subjects who have experienced a cough.

Note: Cough experienced in the previous 24h by the subjects is assessed in the morning of Day 0 to Day 6. If subject has answered question more than once then the most severe intensity is presented.

Note: The assessments performed at Day 0 to Day 6, Day 31, 61, and 91 are used to evaluate cough at Day - 1 to Day 5, Day 30, 60, and 90, respectively.

Note: mCC = Menthol conventional cigarettes; SA = Smoking abstinence; THSm2.2 = Tobacco Heating System 2.2 Menthol.

Note: Percentages for 'Has the subject experienced a cough' are based on the number of subjects indicated in the column header (N). Percentages for intensity of cough are based on the number of subjects who have experienced a cough.

Note: Cough experienced in the previous 24h by the subjects is assessed in the morning of Day 0 to Day 6. If subject has answered question more than once then the most severe intensity is presented.

Note: The assessments performed at Day 0 to Day 6, Day 31, 61, and 91 are used to evaluate cough at Day - 1 to Day 5, Day 30, 60, and 90, respectively.
